

MONTHLY REVIEW

The Lynx Program was profitable in January as gains in commodities and foreign exchange outpaced losses in fixed income and equities. Soon after being sworn into office as the 47th President of the United States, Donald Trump promised to impose an additional 10% tariff on Chinese imports and 25% tariffs on Canadian and Mexican goods coming into the US by the beginning of February. Rising concerns over an impending trade war resulted in increased volatility across financial and commodity markets. Gains in foreign exchange were due largely to long US dollar positions against the Canadian dollar and euro as the greenback appreciated albeit with significant exchange rate fluctuations. In equities, largest losses accrued in the US as the NASDAQ index was the worst performing market in the portfolio during the month. A sharp pullback in AI-related stocks following the news that DeepSeek had used significantly fewer computer chips to train their newest alternative to ChatGPT added to a rather difficult trading environment. In fixed income, losses primarily on the short end of European yield curves modestly outweighed gains in the US and from longer-term German bonds. Finally, in the commodities, coffee was particularly profitable as prices rocketed 15% to a record high on drought conditions in Brazil and declining production in other growing regions. While a 25% tariff on Colombian beans was temporarily delayed, expectations of increased taxes on incoming supply also contributed to the move. Gold was also highly profitable as the safe-haven metal climbed to a new record on elevated geopolitical risks and increased demand from global central banks looking to diversify holdings away from US dollar assets.

ABOUT US

Headquartered in Stockholm, Sweden, Lynx Asset Management was founded with the conviction that a systematic approach was optimal to capitalize on the broadest set of investment opportunities. Since 1999, Lynx has developed and implemented innovative and differentiated proprietary algorithms to invest actively in global equities, fixed income, commodities and currencies. With a broad set of systems and trading concepts, we attempt to meet the goals of our investors by offering a combination of established investment programs and customized solutions. And, as has been the case throughout our history, we are developing dynamic new models to take us into the next generation.

THE PROGRAM

The Lynx Program is our original strategy that was launched in May 2000. It is a diversified managed futures program that aims to deliver high risk-adjusted returns with attractive portfolio characteristics. While the primary approach is systematic trend-following applied across a broad universe of global futures and foreign exchange markets, a portion of the risk is allocated to complementary models that are designed to enhance performance in non-trending market environments. These diversifying models utilize a variety of concepts from quantitative macro to machine learning. The program attempts to identify opportunities across time frames, holding positions from only a few days to over a year.

RISK MANAGEMENT

Risk management is an integrated feature in the investment process. The models operate independently and the portfolio is constructed based on the signals from each model. Individual models apply systematic risk-reducing mechanisms to minimize losses resulting in a dynamic utilization of the risk budget across the portfolio over time. Value-at-Risk is used to limit position concentration and aggregated risks; limits are applied on the instrument, asset class and total portfolio level.

The figures presented are estimates calculated by Lynx Asset Management AB. 1) The net performance figures include interest, costs and fees and reflect the Lynx Fund with a 1% management fee and a 20% performance fee. Index-figures are based on available data at the time of publication and are subject to revision. 2) The Value at Risk (VaR) is measured using a 1-day, 95% confidence interval. VaR is measured with three models capturing different time horizons and the highest risk figure is presented. 3) Gross return excludes interest on unencumbered cash. 4) Based on daily data for the past 12 months.

IMPORTANT INFORMATION

This document is strictly confidential and may not be copied or forwarded without written permission from Lynx Asset Management AB.

Lynx is a special fund as defined in Chapter 1, Section 11 of the Act (2013:561) on managers of alternative investment funds. This material shall not be regarded as investment advice. An investor considering investing in the fund should carefully read the fund's simplified prospectus, subscription document and the information memorandum containing the fund rules. These documents are available for download at www.lynxhedge.se.

Investing in funds is associated with risk. **Past performance is no guarantee of future return.** The value of the capital invested in the fund may increase or decrease and investors cannot be certain of recovering all of their invested capital. The returns are not adjusted for inflation. The fund has no investments in hard-to-value assets for which no market pricing information is available, e.g. some unlisted/private equity, or model priced instruments for which no industry standard software models are available, e.g. complex, structured, one-off contract.

VALUE AT RISK BY ASSET CLASS AND TOTAL PORTFOLIO, %^{2,4}

EXECUTIVE SUMMARY

Strategy	Global managed futures (CTA)
Approach	Systematic, directional, trend following
Instruments	Fixed income, equity index and commodity futures; currency futures and forwards
Targets	Volatility: 18% p.a. before fees Return: High risk-adjusted return Correlation: Low or negative with stock markets
Team	Around 100 employees, the majority within research, system development and trade execution.

KEY POINTS
